

# Now Available

## Selected Papers on

# Light Scattering

A reprint collection of outstanding papers from the world literature on optical and optoelectronic science, engineering, and technology

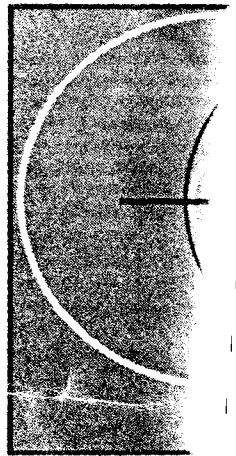

Brian J. Thompson, General Editor, SPIE Milestone Series

**Milton Kerker**  
Editor

Volume 951

1016 pages (two parts)/96 papers  
ISBN 0-89252-986-5  
Published June 1988

SPIE Member \$88  
Nonmember North America \$114  
Nonmember All Other Countries \$130

### Contents

#### BOUNDARY VALUE SOLUTIONS:

**SECTION ONE. HISTORICAL.** Survey of some early studies of the scattering of plane waves by a sphere, N. A. Logan (*Proceedings of the IEEE* 1965).

**SECTION TWO. SPHERES: NEW AND ALTERNATIVE SOLUTIONS.** Light scattering by an optically active sphere, C. F. Bohren (*Chemical Physics Letters* 1974). Scattering and absorption of electromagnetic waves by a gyrotropic sphere, G. W. Ford, S. A. Werner (*Physical Review B* 1978). Optical properties of small metal spheres, R. Ruppin (*Physical Review B* 1975). Optical properties of spatially dispersive dielectric spheres, R. Ruppin (*Journal of the OSA* 1981). Polarizability of a small sphere including nonlocal effects, B. B. Dasgupta, R. Fuchs (*Physical Review B* 1981). Scattering by a rotating dielectric sphere, D. de Zutter (*IEEE Transactions on Antennas and Propagation* 1980). Relativistic scattering of electromagnetic waves by moving obstacles, V. Twersky (*Journal of Mathematical Physics* 1971). Three-dimensional relativistic scattering of electromagnetic waves by an object in uniform translational motion, B. L. Michelsen, G. C. Herman, A. T. de Hoop, D. de Zutter (*Journal of Mathematical Physics* 1981). Model for Raman and fluorescent scattering by molecules embedded in small particles, H. Chew, P. J. McNulty, M. Kerker (*Physical Review A* 1976). Fluorescent and Raman scattering by molecules embedded in small particles: magnetic dipole transitions, H. Chew (*Physical Review A* 1979). Surface enhanced Raman scattering (SERS) by molecules adsorbed at spherical particles: errata, M. Kerker, D.-S. Wang, H. Chew (*Applied Optics* 1980). Electromagnetic aspects of the enhanced Raman scattering by a molecule adsorbed on a polarizable sphere, K. Ohtaka, M. Inoue (*Journal of Physics C: Solid State Physics* 1982). Theory of second-harmonic generation by small metal spheres, X. M. Hua, J. I. Gersten (*Physical Review B* 1986). Scattering of electromagnetic waves from two concentric spheres, A. L. Aden, M. Kerker (*Journal of Applied Physics* 1951). Die Miesche Theorie der Beugung durch dielektrische Kugeln mit absorbierendem Kern und ihre Bedeutung für Probleme der interstellaren Materie und des atmosphärischen Aerosols, Von A. Güttler (*Annalen der Physik* 1952). Scattering from an eccentrically stratified dielectric sphere, J. G. Fikioris, N. K. Uzunoglu (*Journal of the OSA* 1979). Electromagnetic scattering from a radially inhomogeneous sphere, J. R. Wait (*Applied Scientific Research* 1963). Scattering coefficients for a multilayered sphere: analytic expressions and algorithms, R. Bhandari (*Applied Optics* 1985). Scattering of electromagnetic plane waves from inhomogeneous spherically symmetric objects, P. J. Wyatt (*Physical Review* 1962). Scattering of electromagnetic waves from two concentric spheres, when outer shell has a variable refractive index, S. Levine, M. Kerker (*Electromagnetic Scattering* 1963). Light scattering by a sphere on a substrate, P. A. Bobbert, J. Vlieger (*Physica* 1986). Light reflection from a substrate sparsely seeded with spheres—comparison with an ellipsometric experiment, P. A. Bobbert, J. Vlieger, R. Greef (*Physica* 1986).

**SECTION THREE. SPHERES: COMPUTATIONS.** Scattering of electromagnetic radiation by a large sphere, J. R. Wait (*Journal of Research and Development* 1969). Improved Mie scattering coefficients: relationship between Mie's coefficients, B. B. Dasgupta, R. Fuchs, C. F. Bohren

K. Chang (*Optics Letters* 1984). Coherent scattering from individual micrometers, A. Gross (*Optics Letters* 1985). Surface enhancement of coherent scattering from a dielectric cylinder at oblique incidence, D.-S. Wang, M. Kerker (*Journal of the OSA* 1981).

**SECTION SEVEN. CYLINDERS.** Scattering of electromagnetic waves by a dielectric cylinder at oblique incidence, J. R. Wait (*Canadian Journal of Physics* 1969). Some boundary value problems for the scattering of an electromagnetic wave and an elastic wave from an infinitely long cylinder, K. H. B. Wilhelmsson (*Journal of Applied Physics* 1969). Application to an electronic scan of plane waves from an infinitely long cylinder, J. R. Wait (*Applied Optics* 1972). Morphology-dependent scattering from microparticles, M. Kerker (*Applied Optics* 1982). Resonances in scattering from a dielectric cylinder, M. Kerker (*Applied Optics* 1979).

**SECTION EIGHT. SPHEROIDAL PARTICLES.** Scattering of electromagnetic waves by axisymmetric raindrops, T. Oguchi (*Journal of Research and Development* 1969). Scattering by a spheroidal particle randomly oriented, M. Kerker (*Applied Optics* 1979).

**SECTION NINE. CLUSTERS.** Scattering of electromagnetic waves by a cluster of spheres: multipole expansion and ray-tracing, J. R. Wait (*Applied Optics* 1971). Multiple scattering from two dielectric spheres, J. H. Bruning, Y. T. Lo (*Optics Letters* 1983). Scattering from two dielectric spheres, J. H. Bruning, Y. T. Lo (*Optics Letters* 1983). Electromagnetic scattering from molecular systems, O. I. Sindoni (*Applied Optics* 1985). Effects of aggregation on the scattering of light by spheres, B. Borghese, P. Denti, R. Saija, G. Toscano, O. I. Sindoni (*Applied Optics* 1985).
